PROFESSIONAL SUMMARY

Versatile Cloud Security Engineer (CISSP & AWS Security Specialty) with over 8 years of experience across software engineering, infrastructure automation, and data protection. Proven success in architecting secure multi-cloud environments (AWS and Azure), implementing robust DevSecOps pipelines, and engineering automated identity and containment controls. Adept at transforming complex compliance frameworks into scalable, code-driven cloud safeguards.

EDUCATION

Seattle Pacific University

Seattle, WA

Bachelor of Science in Computer Science, June 2018

EXPERIENCE

Senior Application Security Engineer

Dallas/Fort Worth, TX

Luminator, June 2024 – *Present*

- Embedded automated security guardrails, scanning tools (Semgrep/TruffleHog), and secrets management directly into 30+ CI/CD deployment pipelines to ensure infrastructure-as-code (IaC) compliance before production release.
- Managed cloud endpoint security and continuous monitoring telemetry across 1,400+ production workloads utilizing CrowdStrike, configuring automated response playbooks to mitigate threats.
- Architected and deployed secure, serverless cloud infrastructure leveraging Azure Functions and Service Bus to automate identity lifecycle synchronization and enforce least-privilege access across enterprise systems.
- Perform Vuln management/assessments with Defender, PingCastle, Amass, Nmap, etc...
- Partner with Engineering Teams to design and securely deploy cloud resources (AWS/Azure) with embedded security guardrails
- Led Incident Response investigations for critical security alerts utilizing CrowdStrike and MS Defender to contain threats and perform root-cause analysis

Security Consultant

Dallas/Fort Worth, TX

NetSPI, May 2022 – *May 2024*

- Administered 30 Web/Code-Assisted Pen Tests using Burp Suite, Postman, and other tools
- Managed secure code review utilizing SAST/DAST scanning tools such as Semgrep, Contrast, AppInspector, Fortify, Cloc, and Checkmarx
- Designed and implemented declarative Jenkins and GitLab CI/CD pipelines to automate security scanning and continuous compliance checking for cloud application deployments.

Security Consultant

Dallas/Fort Worth, TX

Coalfire, September 2021 – *May 2022*

- Advised clients on technical security and compliance activities
- Performed Web based Application and API Penetration Testing using Burp Suite, Postman, and other tools

- Drafted compliance reports and security policies according to the NIST framework
- Skilled in the understanding of Network and Internet protocols including OSI model

Cyber Test Exploitation Engineer Associate

Dallas/Fort Worth, TX

Lockheed Martin, November 2019 – August 2021

- Developed advanced Splunk queries, macros, and dashboards to operationalize continuous threat detection, behavioral monitoring, and log analysis across hybrid On-Prem and AWS environments
- Directed 20 Web/Network Pen Tests using Burp Suite, Nmap, Metasploit, Postman, and etc ...
- Supervised Virtual machine maintenance such as snapshots and logging using VMware ESXi
- Led comprehensive cloud security posture assessments and configuration reviews in AWS, specifically targeting complex IAM permissions, cross-account access, and blast-radius minimization.
- Contributed to Python development to support bugs and add new features in the Enterprise Purple Team Reporting Framework
- Generated Bash script that helped with Host analysis of Linux machines for IR duties
- Performed detailed Host analysis on systems and servers as part of IR responsibilities
- Gained knowledge in security fundamentals and common vulnerabilities (e.g. OWASP Top Ten)
- Performed Vulnerability Management with Qualys, Nmap, and other tools

Software Developer Intern/Associate Software Developer

Bellevue, WA

T-Mobile, June 2018 – October 2019

- Azure Cloud Management on real-time data processing pipelines
- Created and deployed Enterprise applications with Docker
- Performed Java based software dev. surrounding data engineering with Spring Boot/Kafka
